

MOHAMAD MAHMOUD DAYA

Cybersecurity Analyst | SOC Analyst | Blue Team Specialist

Phone: 050 534 9907 | Email: mdaya0089@gmail.com | Location: Sharjah, UAE | linkedin: <https://www.linkedin.com/in/mohamad-daya-5019472b9/> tryhackme

SUMMARY

Cybersecurity student specializing in Blue Team operations, SOC analysis, and incident response. Experienced in SIEM-based monitoring, log analysis, IDS/IPS validation, and threat detection using tools such as Snort, Wireshark, and tcpdump. Skilled in DFIR, IOC extraction, and MITRE ATT&CK-based analysis. Strong foundation in network security, vulnerability assessment, and security automation using Python and SQL.

EDUCATION

BSc in cybersecurity: *University of Wollongong in Dubai — 2022 – 2026*

High School Diploma: *Beaconhouse Al Khaleej International School (BKIS) — Graduated: 2022*

PROJECTS

SOC Alert Triage & Log Investigation

- Triaged 50+ SOC-style alerts in a simulated environment, correlating logs to identify attack patterns aligned with MITRE ATT&CK techniques and reconstruct incident timelines.
- Reduced false positives by validating IDS alerts using Wireshark and tcpdump.
- Documented escalation-ready findings: key evidence, notable indicators (IPs/domains/URLs), likely cause, and containment + next-step recommendations.

Malicious Document & Macro Analysis (REMnux, oledump, CyberChef, FlareVM)

- Performed **static** analysis of **malicious** Office documents/macros, **tracing** execution flow and **deobfuscating** embedded commands/strings.
- Extracted **IOCs** (domains/URLs, file hashes, suspicious commands) and produced a **DFIR**-style write-up with impact assessment and containment actions.

IDS Monitoring & Detection Validation (Snort, Wireshark, tcpdump)

- Monitored **Snort** IDS alerts and validated detections by inspecting **packet** captures/traffic patterns in Wireshark/tcpdump to separate signal from noise.
- Recorded **investigation** notes, highlighted false positives, and summarized likely attack behavior with recommended response actions

EXPERIENCE

Cybersecurity Assistant | Taj Al Malaki, UAE | Apr 2023 – Jun 2023

- Delivered phishing awareness training to improve user security behavior and reduce risk exposure and reinforced secure password/account practices to support safer daily operations.
- Collected and documented initial incident data to support incident response and escalation workflows and supported escalation when needed.

IT Support & Digital Security Assistant | Evo Creation, UAE | Mar 2024 – May 2024

- Provided IT support with a security-first approach, protecting customer/company data and system integrity during troubleshooting.
- Monitored systems and accounts for suspicious activity, supporting early threat detection and access control management, documented observations, flagged suspicious cases, and supported access management (setup/permissions).

TECHNICAL SKILLS

Security & SOC: SIEM (Splunk, Microsoft Sentinel - basic), Threat Detection, Threat Intelligence, Incident Response, Log Analysis, DFIR, IOC Analysis, MITRE ATT&CK, Endpoint Security (EDR), Network Security Monitoring

Tools: Snort, Wireshark, tcpdump, CyberChef, REMnux, FlareVM, CAPA, Nmap, Vulnerability Scanners

Systems: Linux, Windows, System Hardening, Host-based Firewalls

Networking: TCP/IP, OSI Model, Ports & Protocols, Network Traffic Analysis

Data & Automation: SQL, Data Analysis, Python (basic), Basic Machine Learning, Security Automation
